Subject: Revised Organics tables

Jon and Vicky- The recent data that we got in December from Cabot is problematic for several reasons. It is the first time we have seen several of the organics like triethylene glycol, etc. and it also only sampled a couple of the homes known to have been included in the DEP order. There are many which we don't have names or locations for the residents. We believe the [Ex. 6 - Personal Privacy] home is the home next to the [Ex. 6 - Personal Privacy] home, but not included in any previous samples by Cabot/DEP and there are at least 3-5 others we don't know, so I've updated the previous table color coding the Homes with treatment (green), homes included in the order green plus black, and new residents where this is the first data we have are in purple. All the data for this table comes from the August and September Test America data from Cabot, except for the 3 Ethylene Glycol sample results in blue [Ex. 6 - Personal Privacy] and the [Ex. 6 - Personal Privacy] post treatment data.
